AccuWeather SkyGuard® Warning gives advanced notice to CSX Transportation

Flooding inside a high school. Girls varsity basketball team and other athletes and coaches standing outside the building to get out of the water awaiting rescue by emergency personnel. State highway 20 in West Virginia closed due to flooding.

As reported by WVVA TV, all of this occurred the afternoon of June 21, 2016, as a flash flood came down the valley. Unfortunately, the flash flood was a surprise to those that rely on the National Weather Service as no flood warning of any kind was issued for this event.

However, for CSX Transportation, whose track runs along the river, the flood was not a surprise. AccuWeather Enterprise Solutions provided one of its exclusive SkyGuard Warnings to the railroad nearly one hour in advance of the flooding. The advanced warning enabled CSX to prevent

trains from passing through the area which would have resulted in significant destruction to the trains.

Businesses, governments, and other enterprises across America rely on AccuWeather Enterprise Solutions to protect their people, property and profits with storm warnings and forecasts with Superior Accuracy™.

Call AccuWeather Enterprise Solutions today. After all, the next storm may already be on the way!
